                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            produceable in a mammalian host cell as a secretable and fully functional heterodimer of two polypeptide chains, where one of the polypeptide chains comprises, a CH1-domain (constant domain of an immunoglobulin heavy chain) and the other chain comprises CL-domain (constant domain of an immunoglobulin light chain). The polypeptide chains further comprise, fused to the constant domains at least two (poly)peptides having different receptor or ligand functions, where further at least two of the different (poly)peptides lack an intrinsic affinity for one another and are linked via the constant domains. The heterominibodies have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytostatic, immunostimulatory, antileukaemia and antiproliferative activities. These compounds can be used for diagnosing, preventing and treating malignant cell growth related to malignancies of haematopoietic cells e.g. lymphomas and leukaemias, or to solid tumours e.g. carcinomas, melanomas and sarcomas. The present sequence is the right chain of a heterominibody comprising HD70 single-chain Fv (scFv) fragment N-terminally linked to human Ck domain (constant domain of immunoglobulin-kappa light chain) which bears at its C-terminus the human inflammatory cytokine interleukin-2 (IL-2). HD70 scFv specifically recognises the human epithelial cell adhesion molecule (EpCAM) also called 17-1A antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 524
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New multifunctional compounds useful for preventing and/or treating malignant cell growth and for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 10; Fig 55B; 166pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (MICR-) MICROMET GES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                    CC The invention relates to a novel molecule comprising the antigen binding CC portion of an isolated antibody, which has an increased affinity for a CC receptor protein tyrosine kinase and which blocks constitutive activation CC of the receptor protein tyrosine kinase. The methods and compositions of the invention are useful for treating or inhibiting a skeletal dysplasia, CC craniosynostosis or a cell proliferative disorder. The skeletal dysplasia (CC is achondroplasia, thanatophoric dysplasia, hypochondroplasia, severe CC dysplasia with developmental delay or acanthosis nigricans (CC dysplasia. The craniosynostosis of Crouzin syndrome with acanthosis nigricans. The CC craniosynostosis or Crouzin syndrome with acanthosis nigricans. The cell proliferative disorder is tumour progression that is progression of CC transitional cell carcinoma, osteosarcoma, chondrosarcoma, multiple CC myeloma or mammary carcinoma. This sequence represents the protein CC derived from a Fab expression vector relating to the protein tyrosine vector of the invention vector relating to the protein tyrosine vector of the invention vector relating to the protein tyrosine vector of the invention vector relating to the protein tyrosine vector vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relating to the protein tyrosine vector relat

Publication No. US20030021779A1

GENERAL IMPORMATION:

APPLICANT: Dan, Michael D.

Maiti, Fradip K.

Kaplan, Howard A.

TITLE OF INVENTION: ANTIGEN BINDING FRAGMENTS H11, THAT

TITLE OF INVENTION: ANTIGEN BINDING FRAGMENTS H11, THAT

TITLE OF INVENTION: ANTIGEN BINDING FRAGMENTS H11, THAT

SECTETICALLY DETECT CANCER CELLS, NUCLECTIDES ENCODING THE
FRAGMENTS, AND USE THEREOF FOR THE PROPHYLAXIS AND
DETECTION OF CANCERS

NUMBER OF SEQUENCES: 28

CORRESPONDENCE ADDRESS:
